

SHAILENDRA GOSWAMI

Mumbai, India

+91-7009000981 shailendra.goswami26@gmail.com LinkedIn GitHub Portfolio

Summary

Frontend Developer with multiple production-deployed projects in React.js and vanilla JavaScript. Experienced in API integration, React Context, component architecture, and async data flows — focused on building UIs that solve real problems.

Projects

Subscription Tracker | React.js, Tailwind CSS, Recharts, Lucide React Live | Github

- Built a **multi-view subscription manager** (Dashboard, Subscriptions, Calendar) with a **getNextBillingDate()** algorithm computing renewals across monthly, quarterly, and yearly billing cycles; state persisted via **LocalStorage**.
- Engineered a bento dashboard with a **Recharts AreaChart** (6-month spend trend), **billing cycle normalization**, category-wise spend breakdown, and a renewal engine returning **PENDING / SOON / CONFIRMED** states.
- Implemented **free trial tracking** with Keep/Cancel actions auto-converting trials on expiry; added **toast notifications** and a slide-in **edit panel** for full subscription lifecycle management.

Live UI Playground | React.js, React Context API, CSS Modules, Vite Live | Github

- Managed **6 shared state values** (border radius, shadow, font size, padding, text, accent color) via **React Context API**, eliminating prop drilling across Sidebar, Playground, and CodePanel.
- Built a **dual code generator** outputting Tailwind CSS and raw CSS simultaneously; one-click export via **Clipboard API** with icon state feedback (copy → check) and 2-second auto-reset.
- Structured with **modular component folders** and scoped **CSS Modules**; reusable control primitives include SliderControl, ColorPickerControl, and ButtonGroupControl.

Weather App | JavaScript, OpenWeather API, LocalStorage Live | Github

- Orchestrated **two concurrent OpenWeather API calls** (current + 5-day forecast) with async/await and **try/finally** for loading state; grouped **40 forecast entries** by date, selecting noon readings as representative daily data.
- Implemented a **trigonometric solar arc animation** computing real-time sun position via **Math.cos/sin** from a sunrise-to-sunset percentage with **timezone-corrected UTC timestamps**.
- Persisted **5 deduplicated city searches** in LocalStorage with click-to-reload history; derived contextual labels (e.g. “High – Humid”, “Strong wind”) via **threshold logic** on raw API values.

Dictionary App | JavaScript, DictionaryAPI.dev, Web Audio API Live | Github

- Rendered up to **2 parts of speech** with **3 definitions each**, phonetic notation, and **MP3 pronunciation playback** via Web Audio API; handled missing audio and empty synonym edge cases with inline fallback UI.
- Enabled **recursive word exploration** via synonyms/antonyms as clickable tags using **event delegation** on a single parent container — no per-tag listeners attached.

Technical Skills

Languages: HTML, CSS, JavaScript, C++, SQL

Frameworks/Libraries: React.js, Tailwind CSS, Recharts, Lucide React

Developer Tools: Git, GitHub, VS Code, Vite, Chrome DevTools

Concepts: REST APIs, React Context API, Component Architecture, Async/Await, LocalStorage, OOPs

Education

Master of Computer Applications (MCA) Chitkara University, Punjab	2024 – 2026 CGPA: 8.5
Bachelor of Computer Applications (BCA) Axis Colleges, Uttar Pradesh	2021 – 2024 CGPA: 7.5
