

SHAILENDRA GOSWAMI

Frontend Developer — Mumbai, India

+91-7009000981 | shailendra.goswami50@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Frontend Developer (React, TypeScript, Tailwind) who ships deployed apps with measurable performance wins, including **cutting LCP from 3.8s to 2.0s** on a GraphQL-driven app. Comfortable with URL-synced state, Context-based architecture, and accessible UI (95 Accessibility / 100 SEO). Immediately available; open to relocation.

Projects

Anime Discovery Platform | React.js, TypeScript, AniList GraphQL API

Vercel | 

- Diagnosed a **client-side rendering waterfall** (mount → GraphQL fetch → render → image request) behind a slow hero image, and restructured data-fetch timing to cut **Largest Contentful Paint from 3.8s to 2.0s**, lifting Lighthouse Performance from **74 to 89**.
- Built a multi-criteria discovery system (search, season, year, genre, status, sort) that dynamically generates AniList GraphQL query variables, with server-side pagination.
- Synced filter state to the URL via `useSearchParams()`, making filtered views shareable, bookmarkable, and persistent across refresh.
- Implemented a Context-based watchlist (**WatchlistContext**) persisted to localStorage, merging stored IDs with live GraphQL data in a dedicated view with its own search, sort, and pagination.
- Transformed raw GraphQL responses into presentation-ready data and shipped at **95 Accessibility / 100 SEO** (lab test).

Subscription Tracker | React.js, Recharts, Lucide React

Vercel | 

- Built a centralized `getNextBillingDate()` engine that normalizes monthly, quarterly, and yearly billing cycles, handling edge cases such as month-end billing dates and leap years.
- Modeled the subscription lifecycle as a state machine (**PENDING / SOON / CONFIRMED**) with **automatic trial-to-active conversion** that carries over post-trial pricing while preserving the original record.
- Built a spend-analysis system that normalizes mixed billing cycles to monthly cost, aggregates by category and year, and forecasts future spend, visualized with Recharts across Dashboard, Subscriptions, and Calendar views.
- Reached **99 Lighthouse Performance** (lab test, 0.8s LCP) using React hooks and localStorage only, with no external state library.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frameworks: React.js, Next.js, Tailwind CSS

Concepts: React Hooks, Context API, Client-side Routing, GraphQL, REST APIs, Responsive Design, Accessibility (a11y), Web Performance (Core Web Vitals)

Developer Tools: Git, GitHub, Vite, Chrome DevTools, Vercel, npm

Education

Master of Computer Applications (MCA)

Chitkara University, Punjab

2024 – 2026 (Result Awaited)

Bachelor of Computer Applications (BCA)

Axis Colleges, Uttar Pradesh

2021 – 2024

CGPA: 7.8
