# Shailendra Goswami

**React Developer | Frontend Developer**

Mumbai, India | +91-7009000981 | shailendra.goswami50@gmail.com

linkedin.com/in/shailendra-goswami | github.com/shailendra206 | shailendra206.github.io

## Summary

React Developer and Frontend Developer (React, Next.js, TypeScript, Tailwind CSS) who ships deployed apps with measurable performance wins, including **cutting LCP from 3.8s to 1.2s** on a GraphQL-driven app. Experienced with URL-synced state, Zustand state management, and accessible UI. Immediately available; open to relocation.

## Skills

**Languages:** JavaScript, TypeScript, HTML, CSS
**Frameworks & Libraries:** React.js, Next.js (App Router), Tailwind CSS, Zustand, Recharts, Node.js
**Tools & Concepts:** Git, GitHub, Vite, Figma, Chrome DevTools, Vercel, REST APIs, GraphQL, React Hooks, Context API, Responsive Design, Accessibility (a11y), Web Performance (Core Web Vitals)

## Projects

**Anime Browsing App** | Next.js, React.js, TypeScript, Tailwind CSS, Zustand, GraphQL **Live Demo** | **GitHub**

- Diagnosed a **client-side rendering waterfall** (mount, GraphQL fetch, render, image request) behind a slow hero image and restructured data-fetch timing, cutting **Largest Contentful Paint from 3.8s to 1.2s** and raising Lighthouse Performance from **74 to 97**.
- Built a multi-criteria discovery system (search, season, year, genre, status, sort) that dynamically generates AniList GraphQL query variables, with server-side pagination.
- Synced filter state to the URL via **useSearchParams()**, making filtered views shareable, bookmarkable, and persistent across refresh.
- Implemented a **Zustand** watchlist persisted to localStorage, merging stored IDs with live GraphQL data in a dedicated view with its own search, sort, and pagination.
- Shipped at **97 Performance / 96 Accessibility / 100 Best Practices / 100 SEO** (Lighthouse lab test).

**Subscription Tracker** | React.js, Recharts, Lucide React **Live Demo** | **GitHub**

- Built a centralized **getNextBillingDate()** engine that normalizes monthly, quarterly, and yearly billing cycles, handling edge cases such as month-end dates and leap years.
- Modeled the subscription lifecycle as a state machine (**PENDING / SOON / CONFIRMED**) with **automatic trial-to-active conversion** that carries over post-trial pricing while preserving the original record.
- Built a spend-analysis system that normalizes mixed billing cycles to monthly cost, aggregates by category and year, and forecasts future spend, visualized with Recharts across Dashboard, Subscriptions, and Calendar views.
- Reached **99 Lighthouse Performance** (lab test, 0.8s LCP) using React hooks and localStorage only, with no external state library.

## Education

**Master of Computer Applications (MCA)** 2024 – 2026
Chitkara University, Punjab CGPA: 8.5

**Bachelor of Computer Applications (BCA)** 2021 – 2024
Axis Colleges, Uttar Pradesh CGPA: 7.8
